

Question #	Date Recd	Source Document	Paragraph	Question	Answer
1	7/7/2020			Do the unique wideband transmitter capabilities of our device (i.e. 20-GHz addressable bandwidth with 2 4-GHz wide bands per DAC on a single chip that has 4 DACs.) allow a new RFGEN capability that would be easier to use and less sensitive to analog impairments (totally digital)?	This question does not pertain to the technical requirement. It is up to the vendor to determine if it is a capability they want to include in their response and consider as part of the proposal.
